

2026-2027 SEED BOOK

*Celebrating
125 Years!*

NOTES

NEBRASKA CROP IMPROVEMENT ASSOCIATION

**268 Plant Sciences Hall
Lincoln, Nebraska 68583-0911
402-472-1444 or 888-346-6242
<http://www.necrop.org>**

The **Nebraska Crop Improvement Association** is a not-for-profit, membership-based corporation designated as the official seed and plant part certification agency for the State of Nebraska. It is authorized by the Vice Chancellor of the Institute of Agriculture and Natural Resources at the University of Nebraska–Lincoln, as enabled under state law. In addition to seed certification services, NCIA offers educational opportunities, auditing, seed field inspections, and seed laboratory testing services.

Mission: To support and promote the production and use of high-quality seed through certification, education, and collaboration with the agricultural community.

Vision: To be a trusted resource for improving and assuring seed quality.

About This Publication: For over 120 years, NCIA has partnered with producers, researchers, and seed professionals to support Nebraska's seed industry. The Seed Book provides a comprehensive guide to certified seed varieties grown in Nebraska and where to find them.

Officers

President	Conrad Nelson, Wallace
Vice President	Eric Nelson, Mead
Secretary-Treasurer	Duane Muhlbach, Ravenna

Directors

District 2	Ruben Wehnes, Inland
District 4	Leon Kriesel, Gurley
State-at-Large	Lars Engstrom, Dix
State-at-Large	Randy Peters, McCook
Seed Trade Representative	Mike Fritz, Murdock
Agronomy Representative	Martha Mamo, Lincoln
IANR-UNL Representative	Tiffany Heng-Moss, Lincoln

Staff

Certification Manager	Steve Pageler
Administrative Coordinator	Diane Brestel
Field Services Supervisor	Cody Harris

The purpose of this directory is to provide crop producers, decision makers, and the seed industry with a reference to certified seed sources in Nebraska.

Agronomic and disease ratings are based on variety owner information at release and may not reflect current performance. Updates are made only if provided by the variety owner or authorized source. Contact the variety owner or seed supplier for current information.

This seed book includes those members whose fields were planted with eligible seed stocks and whose applications for field inspection were received by the publication date.

Inquiries about seed supplies and prices should be directed to the growers and/or seed enterprises listed, not to the Nebraska Crop Improvement Association.

In no case is the seed listed in this seed book yet **CERTIFIED**, for it must be conditioned, tested in the laboratory, and labeled with the official certification tag or bulk sale certificate before it can be offered for sale as Certified Seed.

Seed producers, conditioners, and distributors voluntarily use the seed certification process to assure their customers that extra care has been taken to provide them with correctly identified, genetically pure seed. The **CERTIFIED SEED** label identifies seed meeting quality requirements and assures the buyer of obtaining reliable performance of the variety named on the label.

Each member is responsible for handling certifiable seed so that it will meet the Nebraska Seed Certification Standards. The Nebraska Seed Law requires each container to be labeled with its origin, germination percentage and test date, percentage by weight of pure seed, other crop seed, weed seed, and inert matter. By purchasing seed labeled as **CERTIFIED SEED**, a buyer can be assured of its quality. If certified seed is purchased in bulk, each sale is accompanied by an official Bulk Sales Certificate, which includes the same information as a label.

Orders for Certified seed may be accepted by the listed growers, approved conditioners, and authorized distributors only with the understanding that they will be filled if and when **ALL** the certification requirements are completed.

PLANT VARIETY PROTECTION ACT HOW IT BENEFITS YOU!

- Any varieties listed in this publication under the Plant Variety Protection Act will be marked with the **PVP** logo.
- It takes up to ten years to develop a new variety. PVP encourages plant breeding research to produce even better varieties for tomorrow. Without PVP, plant breeders could not afford to invest capital into new varieties and would not be interested in breeding improved varieties.
- Most protected varieties can only be sold as certified seed. This helps ensure that the seed buyer gets the variety exactly as the breeder intended it to be.
- The use of certified seed allows the varieties you've chosen to make the most of the growing environment.
- The Department of Agriculture is responsible for enforcement of Plant Variety Protection violations in Nebraska. Private seed companies are authorized to take appropriate legal action. Contact the Department of Agriculture (402-471-2394) for more information about your rights and responsibilities with PVP varieties.

Notice to Buyer: Exclusion of Warranties and Limitations of Damages

Seed bearing authorized Nebraska Certified Seed labels have met the minimum requirements outlined in the current edition of the Nebraska Seed Certification Standards. The seed certification process relies upon samples and records provided by members which are beyond the control of the certifying agency. Therefore, the Nebraska Crop Improvement Association makes no warranties, expressed or implied, including warranties of merchantability or fitness for a particular purpose concerning certified seed and hereby expressly disclaims the same. In no event shall the Nebraska Crop Improvement Association be responsible for damages, whether actual, incidental, or consequential, regarding certified seed provided by applicants/members and/or vendors. However, complaints addressed to the Nebraska Crop Improvement Association will be investigated.

OAT VARIETY CHARACTERISTICS

1 U.S. Plant Variety Protection: N = not protected, A94 = PVP applied for, P94 = protected under PVP Act.

2 These comparative ratings are based on each variety's average performance within its area of adaptation under normal Nebraska growing conditions and cultural practices. Plant performance will be influenced by soil, weather, pests, and other production conditions.

3 R=resistant; S=susceptible; MR=moderately resistant; MS=moderately susceptible; MT=moderately tolerant; T=tolerant. The reaction may vary depending on disease or development, management practices, and/or plant growth stage or deviations in genetic resistance within the variety.

4 A rank of medium means 15 to 16% grain protein content is typical.

Agronomic and disease ratings are based on variety owner information at release and may not reflect current performance. Updates are made only if provided by the variety owner or authorized source. Contact the variety owner or seed supplier for current information.

HARD RED WINTER WHEAT

PVP AP18 AX - AP18 AX is a medium maturity Aggressor herbicide tolerant line with excellent yield potential. It has strong disease tolerance to wheat streak mosaic virus, leaf rust, and stripe rust. These traits, in addition to its winter hardiness, shatter resistance, and very good test weight, makes AP18 AX a great fit across the plains. U.S. Protected Variety (PVPA 1994). AP18 AX can only be sold as a class of certified seed.

COUNTY	GROWER	TOWN	TELEPHONE	REG	CERT
Red Willow	Peters Seed Farms Inc.*	McCook	308-340-6834		

PVP AP24 AX - AP24 AX is a medium maturity, Aggressor AX herbicide-tolerant line from Syngenta Crop Protection AG. AP24 AX has intermediate tolerance to soilborne mosaic virus and low pH soils. It has good winter hardiness and test weight. It is adapted for use across the plains. Protected by U.S. Patent #9,578,880, #10,370,678 and #11,130,962. U.S. Protected Variety (PVPA 1994). AP24 AX can only be sold as a class of certified seed.

PVP AMPLIFY SF - Amplify SF hard red winter wheat developed by Colorado State University. It is a line selection from the cross Bearpaw/Antero//Antero. Amplify SF is a semi-solid stemmed variety for partial resistance to the wheat stem sawfly. Amplify SF was tested throughout the U.S. hard winter wheat region and has excellent adaptation to areas where the presence of wheat stem sawfly is a significant concern. U.S. Protected Variety (PVPA 1994). Amplify SF can be sold as a class of certified seed.

Cheyenne	Rushman Seeds*	Gurley	308-249-1384		294

PVP LCS ATOMIC AX - LCS Atomic AX is a hard red winter wheat CoAXium® variety. It is an early maturing variety with a short plant type and is a few days earlier than LCS Helix AX. LCS Atomic AX is known for how well it handles heat and drought conditions. This variety has quick emergence and has a strong disease package. LCS Atomic AX is resistant to Aggressor® brand herbicides, making it an excellent tool to clean up fields with Bromus species, feral rye, cereal rye, jointed goatgrass, wild oats and volunteer cereals. U.S. Protected Variety (PVPA 1994). LCS Atomic AX can only be sold as a class of certified seed.

PVP AP BALDY - AP Baldy is a hard red winter wheat developed by Syngenta Crop Protection AG. It was selected for height, maturity, green leaf duration, and disease reaction. AP Baldy is moderately susceptible to common stripe rust races but shows tolerant to moderately tolerant reactions to Barley Yellow Dwarf Virus in the Central Plains. U.S. Protected Variety (PVPA 1994). AP Baldy can only be sold as a class of certified seed.

**Notice: These members of the Nebraska Crop Improvement Association have available carryover certified quality wheat seed from previous years. Contact these NCIA members for more information on availability.*

KS BILL SNYDER - KS Bill Snyder from Kansas State University. It is a medium-maturity and medium-short height variety. It has good to intermediate resistance to stripe, leaf, and stem rust along with moderate resistance to wheat streak mosaic virus, intermediate resistance to Triticum mosaic virus, and is resistant to Soil-borne mosaic virus. KS Bill Snyder also has good drought tolerance, high tillering capacity and excellent straw strength with good baking and milling quality.

Furnas	PSI Applications	Cambridge	308-695-6454		87

PVP BOBCAT - Bobcat is an awned, white chaffed, medium maturity wheat with good straw strength. Bobcat was developed and released by the Montana Agricultural Experiment Station and was selected for its combination of stem solidness, short stature, high yield potential, and excellent performance in wheat stem sawfly infested production environments of north-central Montana. U.S. Protected Variety (PVPA 1994). Bobcat can only be sold as a class of certified seed.

COUNTY	GROWER	TOWN	TELEPHONE	REG	CERT
Kimball	71 Seeds, LLC*	Dix	308-235-7045		

PVP BRAWL CL Plus - Brawl CL Plus is an awned, white-glumed, wheat. It is medium-tall, early maturing and has excellent straw strength. It has a medium-long coleoptile and excellent straw strength, test weight, and baking and milling qualities. Brawl CL Plus has moderate resistance to stripe rust, wheat soilborne mosaic Virus, and powdery mildew. U.S. Protected Variety (PVPA 1994). Brawl CL Plus can only be sold as a class of certified seed.

Box Butte	Millborn Seeds, Inc.*	Hemingford	308-251-6884		
Dawes	Heritage Seed LLC*	Crawford	308-665-1672		

PVP CANVAS - Canvas is a Denali/Antero//Byrd cross providing strong dryland and leading high moisture performance in agronomics and yield. Stripe and stem rust resistance is excellent with good resistance to WSMV & SBMV. Canvas maintains excellent test weight and makes protein very well. End-use quality is very good. Canvas stands well under high fertility and moisture, making it a good candidate for intensive management. U.S. Protected Variety (PVPA 1994). Canvas can only be sold as a class of certified seed.

COUNTY	GROWER	TOWN	TELEPHONE	REG	CERT
Cheyenne	Rushman Seeds*	Gurley	308-249-1384		115

PVP COWBOY - Cowboy is an awned, white-glumed, hard red winter wheat that has been jointly released by the Colorado Agricultural Experiment Station, the University of Wyoming Agricultural Experiment Station and the CRFW. Cowboy is medium in height and coleoptile length with fair straw strength and has adequate winter hardiness for the central and southern Great Plains area. Cowboy has resistance to stripe rust and moderate resistant to US races of stem rust. Cowboy is also resistant to Hessian fly. Cowboy is susceptible to leaf rust and (Ug99) stem rust. U.S. Protected Variety (PVPA 1994). Cowboy can only be sold as a class of certified seed

COUNTY	GROWER	TOWN	TELEPHONE	REG	CERT
Dawes	Heritage Seed LLC*	Crawford	308-665-1672		
Kimball	High Plains Certified Wheat*	Kimball	402-705-4835		

PVP CP 7017 AX - CP 7017 AX has strong yield potential with ability to handle stress. It has a strong tolerance to drought and acid soils and resistant to soilborne mosaic virus. CP7017 AX is a medium maturity wheat with broad adaptability. Use fungicide to manage in areas with history of leaf rust. U.S. Protected Variety (PVPA 1994). CP 7017 AX can only be sold as a class of certified seed.

COUNTY	GROWER	TOWN	TELEPHONE	REG	CERT
Chase	Millborn Seeds, Inc.*	Enders	605-627-1901		

PVP CRESCENT AX - Crescent AX is the newest CoAXium® variety in the PlainsGold lineup with a solid agronomic package and excellent tolerance to Aggressor herbicide. Crescent AX has medium-early maturity, very good test weight, wheat curl mite resistance and very good end-use quality. U.S. Protected Variety (PVPA1994). Crescent can only be sold as a class of certified seed.

COUNTY	GROWER	TOWN	TELEPHONE	REG	CERT
Cheyenne	Rushman Seeds*	Gurley	308-249-1384		230

NE DAYBREAK - NE Daybreak, developed by the University of Nebraska, is a medium-early maturing winter wheat with medium-short semi-dwarf height, medium coleoptile length, good winter hardiness, good straw strength, and good test weight. It is moderately susceptible to stripe rust and leaf rust, moderately resistant to stem rust, susceptible to Fusarium head blight, resistant to soilborne mosaic virus, and susceptible to wheat streak mosaic, Hessian fly, and wheat stem sawfly. U.S. Plant Variety Protection (PVP) is anticipated..

NE FENSTER - NE Fenster, developed by the University of Nebraska–Lincoln, is a hard red winter wheat adapted to the Nebraska Panhandle and similar environments. It is a late-maturing, tall semi-dwarf type with reported high grain yield potential, biomass production, and good standability with low lodging in adapted regions. Plants have green to blue-green leaves, a medium-long coleoptile, good straw strength, and awned, oblong, lax spikes with white glumes that may show purple coloration during grain fill. It has moderate resistance to stripe rust, leaf rust, fusarium head blight, hessian fly, and good resistance to stem rust. It is susceptible to soilborne mosaic virus, wheat streak mosaic virus, and wheat stem sawfly. It has high grain protein, good test weight, and acceptable end-use quality. U.S. Plant Variety Protection (PVP) application is anticipated.

Box Butte	Cullan Farms	Hemingford	308-487-5288	67	

VPF Husker Genetics FREEMAN brand (NE06545) - Freeman is a semi-dwarf wheat moderately early in maturity and approximate mature plant height of 34 inches. It has moderate straw strength and good winter hardiness. It is resistant to Soilborne wheat mosaic virus and moderately resistant to moderately susceptible to stem rust, leaf rust and stripe rust. It is moderately susceptible to Fusarium head blight and susceptible to Hessian fly, barley yellow dwarf virus, and wheat streak mosaic virus. Freeman was developed cooperatively by the Nebraska Agricultural Experiment Station and the USDA-ARS. U.S. Protected Variety (PVPA 1994). Freeman can only be sold as a class of certified seed.

PVP LANGIN - Langin is an awned, white-chaffed, early maturing wheat with medium-short height, a medium length coleoptile, fair straw strength, and good test weight. It is derived from the cross CO050270/Byrd (CO050270=Hatcher/NW97S295 pedigree). Langin has good winterhardness, excellent drought stress tolerance, and very high yield potential. It has improved stripe rust resistance and slightly improved baking quality characteristics compared to Byrd. Langin is moderately resistant to prevalent races of stripe rust, susceptible to leaf rust and stem rust, moderately susceptible to wheat streak mosaic virus, susceptible to all biotypes of the Russian wheat aphid, and resistant to the wheat curl mite and wheat soil borne mosaic virus. It is marketed by the Colorado Wheat Research Foundation under the PlainsGold™ Brand. U.S. Protected Variety (PVPA 1994). Langin can only be sold as a class of certified seed.

HARD WHITE WINTER WHEAT

PVP BRECK - Breck is PlainsGold's newest hard white winter wheat variety. In addition to excellent milling and baking quality, Breck has low grain polyphenol oxidase, a property that favors its use in whole grain applications. It also offers excellent yields, similar to Antero, with excellent test weight and resistance to Stripe Rust. U.S. Protected Variety (PVPA 1994). Breck can only be sold as a class of certified seed.

PVP MONARCH - Monarch is a medium-height, medium-maturing semidwarf wheat developed by Colorado State (CSU). Ownership has been transferred to the Colorado Wheat Research Foundation. It is a doubled haploid (DH) line developed using the wheat-maize hybridization method. It was tested throughout the U.S. hard winter wheat region. It is best adapted for dryland conditions in eastern Colorado, western Kansas, western Nebraska, and the Panhandles of both Oklahoma and Texas. No pest reaction claims are made. U.S. Protected Variety (PVPA 1994). Certificate No. 201900410. Monarch can only be sold as a class of certified seed.

TURFGRASSES

Buffalograss is a long-lived, sod-forming, native warm-season perennial grass which reproduces by seed and spreads vegetatively by stolons. It is very suitable for use under low to medium maintenance as an ecologically sound and energy efficient turf. It may be established by seed, plugs, or sod. Even without mowing, plants are very short height (6-8 inches). Buffalograss begins growth in mid to late May and begins to go dormant with the first frost. It has a light green color and fine textured leaves. It grows best in full sunlight and is adapted to a wide range of soil types. It has a higher resistance to drought stress than cool-season turfgrasses.

CODY - Cody is a widely adapted, versatile turfgrass variety. It has low-growing plants which green up earlier in the spring and have a darker green color than most other buffalograss cultivars. It has a medium green color with excellent density and texture qualities. Once established and properly managed, Cody maintains a high quality turf throughout the summer. Excellent vigor and a good spread rate help it establish quickly. Cody was developed cooperatively by the members of the Native Turfgrass Group and the Nebraska Agricultural Research Division. Seed of Cody is produced and marketed exclusively under the direction of the Native Turfgrass Group.

PVP SUNDANCER - Sundancer is dark green buffalograss with a rapid rate of establishment, high density, and superior turfgrass performance when compared to other seeded buffalograss cultivars that are currently available for use in the turfgrass industry. It is adapted to a broad range of environments as evidenced by its overall performance in turfgrass evaluations conducted in AZ, CO, KS, NE, NM, UT, VA, and WA. Sundancer was developed by the University of Nebraska. Unauthorized production and sale of seed is illegal. U.S. Protected Variety (PVPA 1994). Sundancer can only be sold as a class of certified seed.

PERENNIAL FORAGE GRASSES

Big Bluestem is a native warm-season, sod-forming grass which grows rapidly from mid-spring to early fall. Plants are tall (6+ ft) and robust. It is highly palatable even after maturity and is a high producer of nutritious forage and hay. Big bluestem is adapted statewide for range seedling on subirrigated sites and for irrigated pasture in mixed or pure stands. In eastern Nebraska, it is adapted on silty and clay sites.

PVP BONANZA - Bonanza is a synthetic variety developed by three generations of breeding for improved forage yield and forage digestibility. It produces good forage yields with high digestibility that results in improved animal gains when utilized by beef cattle in well managed grazing systems. Bonanza is earlier in maturity than Kaw, similar in maturity to Pawnee, and later in maturity than Rountree. U.S. Protected Variety (PVPA 1994). Bonanza can only be sold as certified seed.

Custer	Kirk Foster	Berwyn	308-872-1314		27

Little Bluestem is a native, warm-season bunchgrass which grows rapidly from mid June to early August. Plants are medium height (3+ feet) and well tillered. It has good forage value when leaves are tender and succulent, but palatability is only moderate for fall grazing. Little bluestem is adapted statewide for use in warm-season mixtures and pure stands on most soils and sites. It is not as drought tolerant as blue grama.

CAMPER - Camper is a synthetic variety produced by crossing two unrelated strains developed from original prairie sources by the USDA-ARS and Nebraska. It is a moderately late maturing grass, similar in maturity to Pawnee big bluestem. The combination of earlier maturity and diverse parentage provides wide adaptation.

Bromegrass is an introduced cool-season, sod-forming grass which produces abundant forage in the spring and late summer for hay and pasture. It is widely adapted to eastern and central Nebraska and responds to intensive management practices. It is an early maturing grass and has moderate tolerance to drought and grazing.

PVP CACHE - Cache is recommended for use on irrigated and semi-irrigated pastures for forage production. It has increased forage yield, total seed yield, and seedling emergence. It produces significantly more dry matter forage than cultivars Regar and Fleet. Under limited irrigation, Cache meadow bromegrass produced significantly more dry matter than the cultivars Fleet and Regar. Cache is similar to Regar in establishment and persistence but significantly better than Fleet. U.S. Protected Variety (PVPA 1994). Cache can only be sold as a class of certified seed.

Custer	Kirk Foster	Berwyn	308-872-1314	41	

Sideoats Grama is a native warm-season, mildly sod-forming grass which grows rapidly in late spring and may stay green into late summer. Plants are medium height (3+ feet) and well tillered. Forage value and hay quality are good but low in yield. Drought tolerance is good. Sideoats grama is well adapted for use in native grass mixtures throughout Nebraska.

BUTTE - Butte is a variety selected by the USDA-ARS and Nebraska for superior seedling vigor and establishment from native Nebraska ecotypes. It is a medium (mid-summer) maturity grass, somewhat earlier than Trailway. It is widely adapted, especially for those areas with relatively short growing seasons.

Custer	Kirk Foster	Berwyn	308-872-1314		34

Indiangrass is a native warm-season, sod-forming species which provides palatable forage and hay, nearly equal to big bluestem in quality. Plants are 6+ feet and robust. It is well adapted throughout Nebraska for most soils and sites, for use in range or pasture seedings in pure stands, and in mixtures with other tall warm-season grasses.

CHIEF - Chief was developed for improved yield and forage digestibility by USDA-ARS and the University of Nebraska for use in the central Great Plains and Midwest. Chief is adapted to HZ 4 and the upper half of HZ 5. It produces significantly greater forage yields than other available HZ 4 cultivars. It represents the second generation of indiangrass cultivars developed for use in production agriculture. It can be used in pure stands or multispecies mixtures with other grasses.

Intermediate Wheatgrass is a moderately late maturing, cool-season, sod-forming grass that produces excellent quality forage for hay or grazing in the late spring, early summer and fall. It is well adapted to all Major Land Resource Areas in Nebraska. Intermediate wheatgrass is more drought tolerant than smooth brome but less tolerant than crested wheatgrass. Plants are medium height (4+ feet), well tillered, and robust.

PVP BEEFMAKER - Beefmaker is an excellent grass for grazing. The in vitro dry matter digestibility (IVDMD) rating is 1-2 percentage points higher than other released wheatgrasses. Plant height 42.5 inches. The head length is 9.9 inches, and head width is 3.7. The flag leaf is located approximately 30.9 inches from the ground. It was developed by USDA-ARS and the University of Nebraska. U.S. Protected Variety (PVPA 1994). Beefmaker can only be sold as a class of certified seed.

APPROVED SEED CONDITIONERS

An active **Approved Seed Conditioner** system is an important part of Nebraska's seed certification program.

Approved Seed Conditioners are seed cleaning firms authorized by the Board of Directors to:

- Purchase field-approved seed and transport it to their facilities for conditioning
- Submit samples for testing
- Order certification tags and certificates
- Market certified seed products at retail

CUSTOM CERTIFIED CONDITIONERS

The role of the Custom Certified Conditioner is to offer seed cleaning and handling services, which are essential for preparing seed sourced from inspected acres for distribution through marketing channels.

Seed conditioners within this category undergo facility inspections conducted by the Association to guarantee quality assurance for both seed producers and consumers.

2026 NCIA MEMBERS

Grower (GR) – applies for field inspection services and used the services of either Custom or Approved Conditioners to prepare seed for marketing channels.

Custom Certified Conditioner (CC) – does not apply for field inspection services but has adequate facilities for conditioning seed in preparation for sale in marketing channels.

Approved Seed Conditioner (AC) – may or may not apply for field inspection, has facilities for conditioning seed, and may purchase uncleaned seed grown by another member for conditioning, tagging, and sale in marketing channels as a class of certified seed.

Retail Facility (RF) – purchases certified seed from another member to retail the seed. If the seed is sold in bulk the facility must have adequate facilities to maintain the genetic purity of the seed.

Associate Member (AM) – a person or company not involved in the production, conditioning, or marketing of seed but is interested in the Association may become a non-voting member.
